Introductie

Smart-working and detail oriented frontend developer with a passion for improving the User Experience. 3.5 years of experience in bringing mock-ups to life using HTML, CSS and JavaScript. Worked in a team of UI/UX designers, back end and front end developers to meet project goals and create effective user experience with digital products. Professionally experienced in agile development, solving bugs and implementing features. Proven team player and interested in debugging issues and providing quick solutions. Have a constant desire to learn new technologies, including more efficient methods to any problem.

Expertise

- HTML
- E-commerce
- Contentmanagement (CMS)
- Vue.JS
- REST
- Typescript
- JavaScript
- Cascading Style Sheets (CSS)
- Jest
- Github
- ReactJS
- Bootstrap
- Unit testing
- Redux
- SASS, LESS

Werkervaring & Opleiding

Recente ervaring

08/2021 - 03/2022	EVBox
09/2018 - 07/2021	Wunderman Thompson Commerce
10/2014 - 08/2016	Accenture

Talen

- Engels

Vooropleiding

- Bachelor of Technology in Electronics and Communication

Training

Full Stack Web development, Codaisseur Amsterdam

Graduated the immersive 10 week course on complete stacks composed of Javascript, jQuery, Node (incl. ES6), TypeScript, React, SQL, HTML5, Redux and CSS3. Project workflow includes code reviews and quality assessments, standard practices such as basics of product development, UX design and domain modeling, working together in teams using modern tools like Atom, GitHub, Git and Trello.

Functie:	**Front End Developer**
Opdrachtgever:	**Sogeti**
Periode:	May 2022-June 2022

Beschrijving

Currently working as a front end developer at Sogeti. During my days at Sogeti, I have improved my knowledge in Javascript, Typescript, Vue and Unit testing. I have created small projects using public APIs, Javascript, Typescript and Vue and applied best practices. I have written unit tests using Jest and Vue test utils to apply my knowledge. I have also gained knowledge regarding CI/CD.

Expertise

Javascript, Typescript, Unit testing, Jest, Vue test utils, Vue.js

Functie:	**Webdeveloper**
Opdrachtgever:	**EVBox**
Periode:	augustus 2021 - maart 2022

Beschrijving

My responsibility at EVBox was to work on their website to add new pages or implement features using the CMS ModX revolution. The project also involved implementing a redesign on the website. We worked in sprints and had planning, refinement and estimation meetings biweekly. Along with close collaboration with the UX designer and product owner, we discussed the stories, suggested changes if required and build the redesigned/new pages using HTML,SCSS, Javascript and Vue.js. I was also involved in fixing bugs on the website.

Another task for me was to implement a product configuration application from scratch for the company's new product.Upon discussion with product owner, UX designer and content marketer, we refined the epic

and splitted it into multiple stories. I worked on 2 to 3 stories each sprint and were finally tested by the team. I have implemented that independently using HTML, SCSS, Javascript and Vue.js. I integrated the application with REST API and connected to Hubspot to submit data. The application is live and we were able to see successful submissions from end users for the new product.

Expertise

Agile/Scrum, Bitbucket, Contentmanagement (CMS), Cascading Style Sheets (CSS), Github, HTML, JavaScript, REST, Software Engineering, Vue.JS, Web-applicaties

Functie:	**Frontend Developer**
Opdrachtgever:	**Wunderman Thompson Commerce**
Periode:	september 2018 - juli 2021

Beschrijving

I worked for different ecommerce clients at Wunderman Thompson Commerce. My tasks were to implement redesign for the website, fix bugs and develop new features for them. We used an ecommerce platform called Intershop for the same. We worked in sprints in a team consisting of front-end and back-end developers, testers, UI/UX designers, business analyst, client manager, scrum master and project manager. We were having pre-refinements, refinements, estimation , planning and retrospective meetings every 2 weeks. My main task was to refine the stories, collaborate with designers on the mockups, discuss with clients on requirements, write or split user stories if required, estimate the stories and develop solutions. I worked using HTML, SCSS, LESS, Bootstrap and Javascript. I was also involved in triaging and debugging production issues and preparing the deployment plan. I also helped other developers to fix issues in the code.

I also pushed myself out of my comfort zone to do A/B testing for a client. It was the first project in A/B testing in our company and I was the only developer involved in it. We were a team consisting of a UI/UX designer, CX consultant and me. We developed the tests using Optimizely after attending the training at the Optimizely office in Amsterdam. My task involved discussing with my teammates if the test idea is possible to implement and if not we discussed together and came up with alternatives. I implemented the tests using HTML, SCSS and Javascript. I was involved from the beginning stage i.e. implementing the Optimizely script on their website to creating, developing and testing the implemented tests. I launched them live every 2 weeks and we tracked the results together to see if it was a success. There were many successful tests and client saw an increase in revenue after implementing them.

Expertise

Agile/Scrum, E-commerce, HTML5, JavaScript, Leaner CSS (LESS), Syntactically Awesome Stylesheets (SASS), SDLC, Usability testing, Vue.JS, Storybook

Functie:	**Application Support Analyst**
Opdrachtgever:	**Accenture**
Periode:	oktober 2014 - augustus 2016

Beschrijving

I was involved in supporting and maintaining a production application for a client. My role was a support role in which I worked on service requests, change requests and deployments. I prepared the implementation plan for deployments, provided support and coordinated with other teams during deployments, worked on root cause analysis of major issues, and wrote UNIX shell scripts on the server to reduce manual work. I also trained 2 new joiners to our team and supported the team during critical issues as the first point of contact for the client.

Expertise

Technisch applicatiebeheer, Telecommunicatie
